

**Moseley Forum AGM**

**Moseley's Beating Heart 27 February 2018**

## What is our role?

- We have been working with the Forum for some time
- We have helped the Forum gain funding from the City Council – this gives us a budget to carry out traffic modelling
- What we model is up to the community – we will facilitate a community design workshop in late spring to early summer 2018
- Before that, University students will be carrying traffic surveys under our direction

## Local Innovation Fund

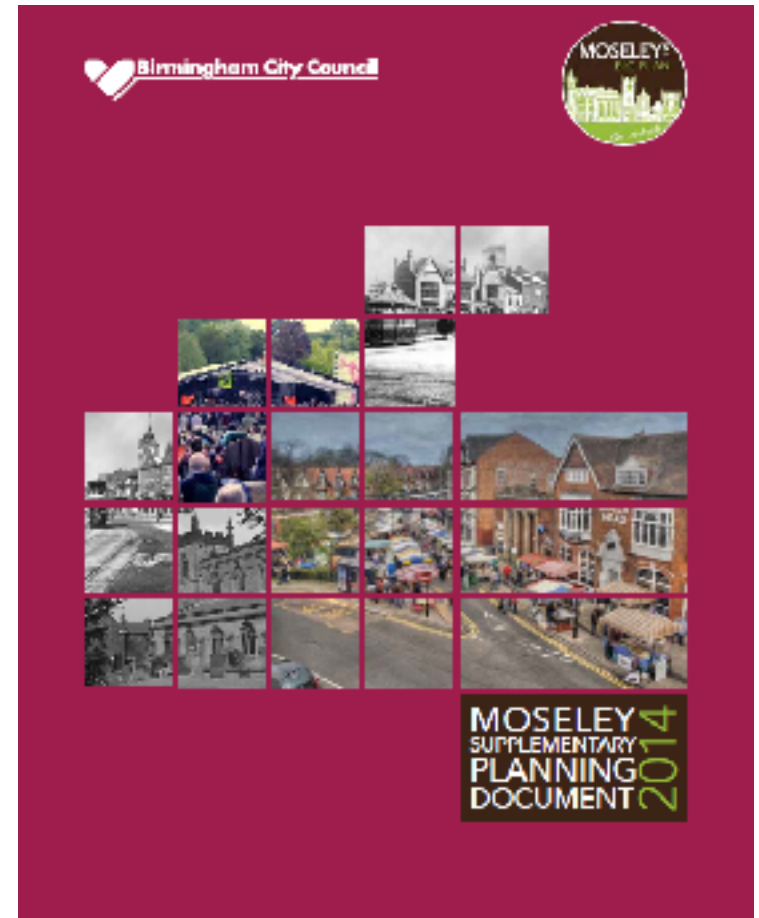

***"I've made it clear that I want this city council to start doing things 'with' the city not 'to' the city and the four assistant leaders were appointed to help shift power from the centre of the city and the city council out to local communities."***

***"That's exactly what the Local Innovation Fund aims to do and this is a real opportunity for ward councillors to work closely with their communities to make a difference right across the city."***

~ John Clancy, former leader of Birmingham City Council

# What are the principles?

- Moseley SPD has set out the principles of streets needing to have greater pedestrian priority
- Conflict between Alcester Road being a major route into Birmingham but also a local High Street
- And a holistic approach ...

## PRINCIPLES CONT'D

There is a recent trend in moving away from traditional traffic management thinking to a more holistic approach – these have been variously called:

- Shared spaces

- Mixed priority streets

- Complete streets

- Naked streets

# Scope for Change

# Bexleyheath, SE London

# Poynton, Cheshire

## What next?

- Moseley Forum inviting stakeholders (local residents, businesses, group reps etc) to sit on a community design group
- Uni of Birmingham students are collecting traffic data in the next few months
  - Volunteers still needed!
- We will facilitate a design workshop with a community design group – Spring 2018

- Students will analyse traffic data and the results will be presented to this design group
- After the community design, we will take away the concepts and test it using traffic simulation software
- We will report the outcomes to the Forum in Autumn 2018 for a public consultation and then final agreement on a design for Moseley

If you want to help with traffic data collection or sit on the design group, please give your names in this evening or contact the Forum

**Thank you**
